

# Diverter Valve

Your Single Source Supplier

- Installation is quick and easy
- Designed to withstand the highest industry standards in pressures among diverter valves
- New design reduces noise to enhance a peaceful spa experience
- Available in different colors and designs for a custom look

# DiverterValve

## A quieter spa diverter valve that is easier to adjust, install and maintain.

Small part. Big improvements. The new Balboa spa diverter valve delivers advantages for everyone in the construction, maintenance and use of your spas. This 2" diameter valve is available in our Sapphire design in standard colors of silver, gray, and dark gray, or custom colors and finishes to complement every spa.

- Operating noise is reduced to preserve the peace of the spa experience. A patent pending wing design on the diverter and an internal sweep minimize the turbulence that causes most noise. Plus, the diverter mechanism is firmly secured within the pipe, so it cannot "float" and bang against other components.
- Patent pending center pin in diverter aligns with the valve body, so flow adjustments are made with a smooth, easy turn of the handle.
- Maintenance is easier, too, thanks to a top serviceable design that provides access without removing the valve from the spa. An exclusive retainer ring prevents the valve from falling through the opening in the spa during installation or maintenance. High-end tolerances in design have reduced the frequency of maintenance.
- Can withstand the highest pressure among the industry in diverter valves.
- Tight dimensional tolerances on all parts prevent creeping of diverter adjustment.
- Our innovative, new Star design interface attaches the handle securely to the valve, preventing skipping or stripping typical with octagonal designs.
- To assure clean, tight installations every time without glue, a compensator ring and L-gasket system is included to overcome imperfections in spa walls.

## Installation Requirements

Hole size 3"	Diameter
Bar Top Area . . . . .	4 9/16" Minimum Diameter
Recommended Torque . . . . .	10-15 ft lbs
Installation Tool . . . . .	.948700

When ordering, replace the XX with the finish codes:  
35 - Light Grey      81 - Silver      WW - Dark Grey

Customization of colors and finishes available upon request

## The Strength Of An Industry Leader

Balboa Water Group provides a full range of industry-leading products engineered to offer consistency, high quality and long service life. Our experienced staff can supply consulting, design, and manufacturing support to help you achieve a particular stylized appearance, provide new capabilities, or offer a more economical alternative. Our customer service and distribution centers are strategically located to offer you immediate and reliable service.
