

The remote that floats.

balboa-instruments.com

Waterproof technology

Use in the comfort of your spa or pool
Uses patented Piezo technology

Multi-tasking control

Control pumps, blowers and lights
Operate up to three pumps

Certificate no. 900854

Controlling all of your hot tub's systems and features with a simple touch of a button is no longer a remote possibility. It's a remote reality with the Phazer™ infrared remote control.

The Phazer's waterproof technology means you enjoy handheld control of your hot tub – jets, blowers and lights – whether you're in the water or in your home. Phazer operates up to three jets and can activate your hot tub's LED and fiber-optic lighting. And tune in or turn up the volume of your in-hot-tub audio/video system. Its infrared receiver can be easily installed on any hot tub model.

With different button configurations, we have a Phazer model that's right for you. Ask your dealer about the Round Phazer infrared remote. Available in CE version.
