Balboa Instruments
System PN 54519-02

System Model # GS5-GS511Z-RCA-3.0
Software Version # 43
EPN # 2720

Base PCBA - PN 54520-02
PCB GS500Z - PN 22015 Rev B

Base Panels
VL401 (LCD Lite Duplex) – PN 54251
VL402 (LCD Duplex Digital) – PN 54107
VL403 (LED Lite Duplex) – PN 54104-01
VL404 (LED Duplex Digital) – PN 51248
## System Revision History

**Basic System Features and Functions**

### Power Requirements

**Single Service** [3 wires (line, neutral, ground)]
- 230VAC, 50Hz, 1~, 16A/32A, (Circuit Breaker rating = 20A/40A max.)

**Dual Service** [5 wires (line 1, neutral 1, line 2, neutral 2, ground)]
- 230VAC, 50Hz, 1~, 2x 16A, (Circuit Breaker rating = 20A max each service.)

### System Outputs

**Setup 1 (As Manufactured)**
- 230V Pump 1, 2-Speed
- 230V Pump 2, 2-Speed
- 230V Ozone
- 10V Spa Light
- 230V AV (Stereo)
- 3.0kW Heater *

**Optional Devices**
- 230V Circ Pump

---

* Heater wattage is rated at 240V.

### Additional Options

- Full Feature Dolphin Remote and Spa-only Dolphin Remote
- IR Receiver Module
  - Connects to terminal J1 or J2 (Must be 8-pin connector)
- MoodEFX Lighting
  - Connects to Spa Light terminal J20
- FiberEFX Lighting
  - Connects to Spa Light terminal J20
Any time you change a DIP Switch, other than A1, you must reset Persistent Memory for your new DIP Switch Settings changes to take effect. If you do not reset Persistent Memory, your system may function improperly.

**To reset Persistent Memory:**
- Power down by disconnecting power source from spa.
- Put a jumper across J43, covering both pins. (See illustration below)
- Power up by connecting power source to spa.
- Wait until “P” is displayed on your panel.
- Power down again.
- Remove jumper from J43 (May also move to cover 1 pin only)
- Power up again.

**About Persistent Memory and Time of Day Retention:**
This system uses memory that doesn’t require a battery to store a variety of settings. What we refer to as Persistent Memory stores the filter settings, the set temperature, and the heat mode.

Persistent Memory is not used for Time of Day. Only models with a Serial Deluxe panel installed (VS5xxDZ and GS5xxDZ) can display the time. However, during power loss to the spa, the system will lose the correct time, and reset to 12:00 PM when power is restored.

**Power Up Display Sequence**
Upon power up, you should see the following on the display:
- Three numbers in a row, which are the SSID (the System Software ID). The third display of these numbers is the Software Version, which should match the version of your system. For example, if these three numbers are 100 67 38, that is a VS511SZ at version 38.
- Displayed next is: “Z4” (indicating the system is configured for a heater between 3 and 6 kW) or “Z” (indicating the system is configured for a heater effectively between 1 and 3 kW). “Z4” should appear for all VS models running at 240VAC. “Z” should appear for all VS models running at 120VAC, as well as all GS models. (*A heater which is rated at 4 kW at 240VAC will function as a 1 kW heater at 120VAC.)
- “P” will appear to signal the start of Priming Mode.

At this point, the power up sequence is complete. Refer to the Reference Card for the VS or GS System model of your spa for information about how the spa operates from this point on, including how to adjust the Time of Day if using a Serial Deluxe style panel.
Switchbank A

- **SSID #**
  - 100
  - 67
  - 43

- **A1**, Test Mode OFF
- **A2**, See Table 1
- **A3**, Duplex Panel
- **A4**, Aux Freeze
- **A5**, 2-speed P1

- **A6**, 50 Hz
- **A7**, Mode changes allowed
- **A8**, Degrees C
- **A9**, Non-Circ Mode
- **A10**, See Table 1

- **J11**, 3.0kW Heater
- **J12**, GS511Z Software
- **J13**, Memory Reset

Panel Button Assignments

- 1=Pump 2
- 2=Pump 1
- 3=Temp
- 4=Light

Panel Button Positions

**WARNING:** Main Power to system should be turned OFF BEFORE adjusting DIP switches.

**WARNING:** Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)

**HiPot Testing Note:**
Disconnect slip terminal with green wires from J90 prior to performing HiPot test. Failure to disconnect may cause a false failure of the test. Reconnect terminal to J90 after successful completion of HiPot test.

**WARNING:** Main Power to system should be turned OFF BEFORE adjusting DIP switches.

**WARNING:** Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)
DIP Switches and Jumpers Definitions

SSID 100 67 43

Base Model GS511Z

DIP Switch Key
A1 Test Mode (normally OFF)
A2+A10 Control amp draw requirements (See Table 1)

A3 “ON” position: use Mini Panel
“OFF” position: use Digital Duplex or Light Duplex panel
A4 Aux Freeze (must be OFF)
A5+A9 Pump 1 speeds and Circ Modes:

<table>
<thead>
<tr>
<th>A5</th>
<th>A9</th>
<th>Circ Mode</th>
<th>Pump 1 Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>OFF</td>
<td>Non-circ</td>
<td>2-speed</td>
</tr>
<tr>
<td>ON</td>
<td>OFF</td>
<td>Circ “acts like Pump 1 low” (filters/polls/ect)</td>
<td>1-speed</td>
</tr>
<tr>
<td>OFF</td>
<td>ON</td>
<td>24 hours with 3°F shut-off</td>
<td>1-speed</td>
</tr>
<tr>
<td>ON</td>
<td>ON</td>
<td>24 hours with 3°F shut-off</td>
<td>2-speed</td>
</tr>
</tbody>
</table>

A6 “ON” position: 50Hz operation
“OFF” position: 60Hz operation

A7 “ON” position: Standard mode only
“OFF” position: Std/Ecn/Sleep mode changes allowed

A8 “ON” position: temperature is displayed in degrees Celsius
“OFF” position: temperature is displayed in degrees Fahrenheit

Note: Panel layout is always Pump 2, Pump 1, Temp, Light

Alert:
2-speed Pump 2 is required, connect to Expander board. This system is not compatible with 3-phase power input. Use GS520Z for 3-phase power.

Jumper Key
J11 If using 3kW or higher wattage heater, jumper can be set in either position, but may perform better on Pins 1 and 2. If using 2.5kW or lower wattage heater, jumper must be set on 1 Pin only.

J12 Factory set. DO NOT MOVE.
Jumper must be on Pins 1 and 2 for GS51xZ/GS52xZ/GS5xxSZ/GS5xxDZ software.
Jumper must be on Pins 2 and 3 for GS50xZ software.

J43 When jumper is placed on 2 pins during power-up, system will reset persistent memory.
Leave on 1 pin only to enable persistent memory feature.

WARNING:
• Setting DIP switches incorrectly may cause abnormal system behavior and/or damage to system components.
• Refer to Switchbank illustration on Wiring Configuration page for correct settings for this system.
• Contact Balboa if you require additional configuration pages added to this tech sheet.

Alert:
2-speed Pump 2 is required, connect to Expander board. This system is not compatible with 3-phase power input. Use GS520Z for 3-phase power.

Electrical Service Configuration Options

Systems with PCB Rev B Only

Single Service, TN and TT Electrical Systems
(1 x 16 Amp or 1 x 32 Amp)
3 Wires (1 Line + 1 Neutral + 1 Protective Earth)
Protective Earth wire (Green/Yellow) must be connected to system ground terminal as marked.

This option is configured and shipped as the default.

All equipment (pumps, blower, and beater) runs on service line L1.

Systems using only 1 DIP switch (A10) for heat disable:
For 1 x 16 Amp Service:
   DIP Switch A10 must be ON.
For 1 x 32 Amp Service:
   Set DIP Switch A10 such that total system amperage draw never exceeds rated service input.

Systems using multiple DIP switches for heat disable:
   Refer to system Hot Sheet DIP Switch Definition page and set the switches shown in Table 1 such that total system amperage draw never exceeds rated service input.

Dual Service, TN and TT Electrical Systems
(2 x 16 Amp)
5 Wires (2 Lines + 2 Neutrals + 1 Protective Earth)
Protective Earth wire (Green/Yellow) must be connected to system ground terminal as marked.

The beater runs on service line L1, while all other equipment, such as pumps and blowers, run on service line L2.

Completely remove the white wire from J26 and J32.
Note: J32 and J25 are electrically identical. The white wire may be attached to either terminal before removal.

Systems using only 1 DIP switch (A10) for heat disable:
   DIP Switch A10 must be OFF.
Systems using multiple DIP switches for heat disable:
   Refer to system Hot Sheet DIP Switch Definition page and set both switches shown in Table 1 to ON positions.
**Electrical Service Configuration Options**

**Systems with PCB Rev B Only**

**Single Service, IT Electrical System (No Neutral)**

Line - Line voltage is 230VAC (1 x 16 Amp or 1 x 32 Amp)
3 Wires (2 Lines + 1 Protective Earth)

Protective Earth wire (Green/Yellow) must be connected to system ground terminal as marked.

*All equipment (pumps, blower, and heater) runs on service line L1 with L2 acting as the return.*

Systems using only 1 DIP switch (A10) for heat disable:
- For 1 x 16 Amp Service:
  - DIP Switch A10 must be ON.
- For 1 x 32 Amp Service:
  - Set DIP Switch A10 such that total system amperage draw never exceeds rated service input.

Systems using multiple DIP switches for heat disable:
- Refer to system Hot Sheet DIP Switch Definition page and set the switches shown in Table 1 such that total system amperage draw never exceeds rated service input.

**NOTE:**
- Not all GS5xxZ systems can support 3-Phase.
- 3-Phase requires System PCB Rev B.
- If using an expansion board, the board must have fuse-protection.
Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.

Balboa Ozone connector configuration for 230VAC 50Hz:

- Black or Brown Line Conductor
- Empty
- White or Blue Neutral Conductor
- Empty

Flat sides of sockets as shown

- Line - Black or Brown conductor
- Neutral - White or Blue conductor
- Not used

Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.
**Duplex Panel Configurations**

**VL402 (LCD Duplex Digital)**
PN 54107 with Overlay PN 10764
- Connects to Main Board terminal J1 or J2
- Not compatible with some configurations; not recommended for new designs

**VL401 (LCD Lite Digital)**
PN 54251 with Overlay PN 11671
- Connects to Main Board terminal J1 or J2

**VL402 (LCD Duplex Digital)**
PN 54104-01 with Overlay PN 10752
- Connects to Main Board terminal J1 or J2
- Not compatible with some configurations; not recommended for new designs
