System Model # VSP-VS300FH4-DCAJ  
Software Version # 41  
EPN # 2668

Base PCBA - PN 54646-01  
PCB VS500Z - PN 22972 Rev D

Base Panels  
VL401 (LCD Lite Duplex) – PN 54665  
VL403 (LED Lite Duplex) – PN 54664  
VL406U – PN 55350

Optional Base Panels  
VL200 (Mini) – PN 55123  
VL240 (MVP240) – PN 55080  
VL260 (MVP260) – PN 55081

Basic System Features and Functions

Power Requirements

- 240VAC, 60Hz, 40A, Class A GFCI-protected service (Circuit Breaker rating = 50A max.)
- 4 wires [hot, hot, neutral, ground]

System Outputs

Setup 1 (As Manufactured)

- 240V Pump 1, 2-Speed
- 240V Ozone *
- 12V Spa Light
- 4.0kW @ 240V Heater **
- VL401, VL403, or VL406U Panel (DIP switch A3 must be OFF)

Optional Panels

- VL200, VL240, or VL260 Panel (DIP switch A3 must be ON)

* Ozone runs with P1-low and must be same voltage as Pump 1.
** Heater wattage is rated at 240V. When running 120V to heater, output is approximately 25%.

Additional Options

- MoodEFX Lighting
  Connects to Spa Light terminal J20
- FiberEFX Lighting
  Connects to Spa Light terminal J20
Any time you change a DIP Switch, other than A1, you must reset Persistent Memory for your new DIP Switch Settings changes to take effect. If you do not reset Persistent Memory, your system may function improperly.

To reset Persistent Memory:
- Power down by disconnecting power source from spa.
- Put a jumper across J43, covering both pins. (See illustration below)
- Power up by connecting power source to spa.
- Wait until “PR” is displayed on your panel.
- Power down again.
- Remove jumper from J43 (May also move to cover 1 pin only)
- Power up again.

About Persistent Memory and Time of Day Retention:
This system uses memory that doesn’t require a battery to store a variety of settings. What we refer to as Persistent Memory stores the filter settings, the set temperature, and the heat mode.

Persistent Memory is not used for Time of Day. Only models with a Serial Deluxe panel installed (VS5xxZ and GS5xxZ) can display the time. However, during power loss to the spa, the system will lose the correct time, and reset to 12:00 PM when power is restored.

Power Up Display Sequence
Upon power up, you should see the following on the display:
- Three numbers in a row, which are the SSID (the System Software ID). The third display of these numbers is the Software Version, which should match the version of your system. For example, if these three numbers are 100 67 38, that is a VS511SZ at version 38.
- Displayed next is: “24” (indicating the system is configured for a heater between 3 and 6 kW) or “2” (indicating the system is configured for a heater effectively* between 1 and 3 kW). “24” should appear for all VS models running at 240VAC. “2” should appear for all GS models running at 120VAC, as well as all VS models. (A heater which is rated at 4 kW at 240VAC will function as a 1 kW heater at 120VAC.)
- “PR” will appear to signal the start of Priming Mode.

At this point, the power up sequence is complete. Refer to the Reference Card for the VS or GS System model of your spa for information about how the spa operates from this point on, including how to adjust the Time of Day if using a Serial Deluxe style panel.
**Wiring Configuration and DIP Settings**

**Setup 1 (As Manufactured)**

- 240V Pump 1, 2-Speed
- 12V Spa Light
- 240V Ozone
- 240V 4.0kW Heater (Approx. 1.0kW @ 120V)
- VL401, VL403, or VL406U Main Panel

---

**WARNING:** Main Power to system should be turned OFF BEFORE adjusting DIP switches.

**WARNING:** Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)

---

**Switchbank A**

DIP Switches and Jumpers Definitions

SSID 100 59 41
Base Model VS300F

DIP Switch Key

A1 Test Mode (normally OFF)
A2 “ON” position: Button layout will be: Pump 1, Light, Temp Down, Temp Up *
“OFF” position: Button layout will be: Unused, Pump 1, Temp, Light
A3 “ON” position: use Mini Panel *
“OFF” position: use Lite Duplex or Digital Duplex panel
A4 N/A (must be OFF)
A5 Pump 1 high-speed timeout, see Table 1
A6 “ON” position: 50Hz operation
“OFF” position: 60Hz operation
A7 “ON” position: Standard mode only
“OFF” position: Std/Ecn/Sleep mode changes allowed
A8 “ON” position: temperature is displayed in degrees Celsius
“OFF” position: temperature is displayed in degrees Fahrenheit
A9 Pump 1 low-speed timeout, see Table 1
A10 “ON” position: heater is disabled while the high-speed pump is running (low amperage mode)
“OFF” position: heater can run while the high-speed pump is running (high amperage mode)

* Panels with button layout  are not compatible when A2 or A3 is ON.
Note: No blower or second pump available.

Warning:

Setting DIP switches incorrectly may cause abnormal system behavior and/or damage to system components.
Refer to Switchbank illustration on Wiring Configuration page for correct settings for this system.
Contact Balboa if you require additional configuration pages added to this hot sheet.

Jumper Key

J43 When jumper is placed on 2 pins during power-up, system will reset persistent memory.
Leave on 1 pin only to enable persistent memory feature.

Ozone Connections

Ozone voltage must be wired to same voltage as Pump 1.

**Ozone Connector Voltage:** The VS300/VS300F circuit board is factory configured to deliver a preset voltage (120V or 240V) to the on-board ozone connector (J29). See the ratings table on the wiring diagram attached to the cover of the enclosure for the configured voltage. For 240V output W2 connects to Red AC and for 120V output W2 connects to White AC.

The voltage to the ozone connector can be changed in the field if required. W2 just needs to be set for the required voltage. **Reminder: Ozone voltage must be set to match Pump 1 voltage.**

**Balboa Ozone Generator:** If the board is set up to operate a 120V ozone generator, the connector on the ozone generator is likely to be configured correctly, but should be compared to the illustration below.

If a 240V ozone generator is required, be sure the red wire in the ozone cord is positioned in the connector next to the green ground wire as described below.

*Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.*

**Balboa Ozone connector configuration for 120V 60Hz**

- Line - Black conductor
- Use this slot for the leftover Red conductor
- Common - Install the White conductor here for 120V ozone
- Ground (Green) conductor

**Balboa Ozone connector configuration for 240V 60Hz**

- Line - Black conductor
- Use this slot for the leftover White conductor
- Common - Install the Red conductor here for 240V ozone
- Ground (Green) conductor

**Ozone Connections**

Ozone voltage must be wired to same voltage as Pump 1.

**Ozone Connector Voltage:** The VS300/VS300F circuit board is factory configured to deliver a preset voltage (120V or 240V) to the on-board ozone connector (J29). See the ratings table on the wiring diagram attached to the cover of the enclosure for the configured voltage. For 240V output W2 connects to Red AC and for 120V output W2 connects to White AC.

The voltage to the ozone connector can be changed in the field if required. W2 just needs to be set for the required voltage. **Reminder: Ozone voltage must be set to match Pump 1 voltage.**

**Balboa Ozone Generator:** If the board is set up to operate a 120V ozone generator, the connector on the ozone generator is likely to be configured correctly, but should be compared to the illustration below.

If a 240V ozone generator is required, be sure the red wire in the ozone cord is positioned in the connector next to the green ground wire as described below.

*Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.*
### Duplex Panel Configurations

#### Setup (As Manufactured)

**VL406U**
- PN 55350 with Overlay PN 11947
- Connects to Main Board terminal J1
- Cannot convert to VL406T by changing overlay

**VL403 (Lite Digital)**
- PN 54664 with Overlay PN 11884
  - Connects to Main Panel terminal J1

**VL401 (Lite Digital)**
- PN 54665 with Overlay PN 11885
  - Connects to Main Panel terminal J1

#### Optional Panels

**VL260 (MVP260)**
- PN 55081 with Overlay PN 11746
  - Connects to Main Panel terminal J1

**VL200 (Mini Panel)**
- PN 55123 with Overlay PN 11852
  - Connects to Main Panel terminal J1

**VL240 (MVP240)**
- PN 55080 with Overlay PN 11745
  - Connects to Main Panel terminal J1
